Lead Google Cloud Trainer

Epic Games Workshop

Agenda

01
Welcome, Mission Briefing & LiveOps
Problem Statement (~ 30 Minutes)

02
Environment Setup
(~ 15 Minutes)

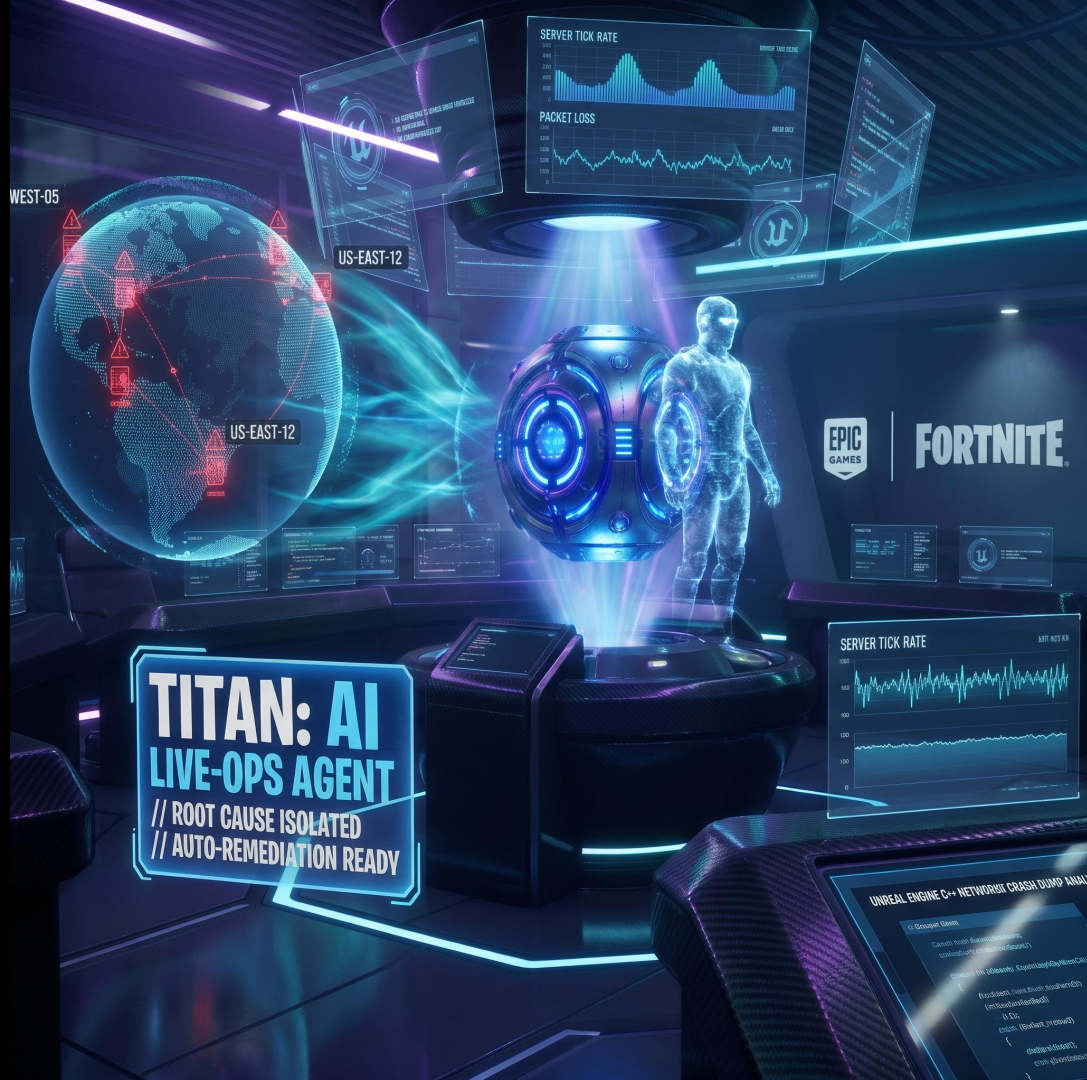

03
Build Titan with Antigravity (~ 1 hour)
Plan Review, Subagents, Tests & Eval

04
☕ **Bio Break & Lightning Q&A**
(~ 15 Minutes)

05
Cloud Deployment to Agent Runtime
(30 Minutes)

06
Gemini Enterprise Publishing & Interaction
(15 Minutes)

07
Closing and Wrap-Up

Google Cloud

Google Antigravity

One agent harness, many surfaces

Antigravity 2.0

Build, orchestrate, and scale agents with support for voice, tasks, and subagents.

Antigravity CLI

Lightweight command-line interface for developers

Antigravity IDE Extension

Bring the power of Antigravity in the IDE of your choice

Antigravity SDK

Build your own application on top of the Antigravity harness

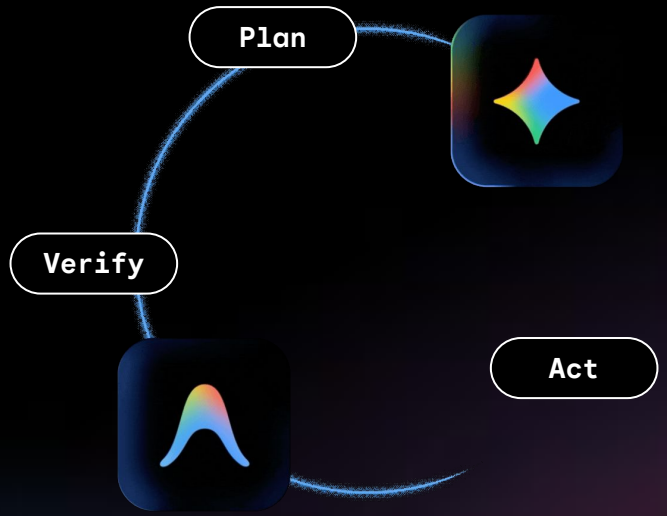

Powered by a unified Antigravity harness

Co-optimized with Gemini

Plan → Act → Verify

A transparent agent loop you review and steer at every step, through inspectable artifacts

- Implementation plans
- Code diffs
- Change walkthroughs
- Screenshots and browser recordings

Antigravity 2.0

Dedicated surface for orchestrating agents, designed to reach builders beyond traditional developers.

Scheduled Tasks

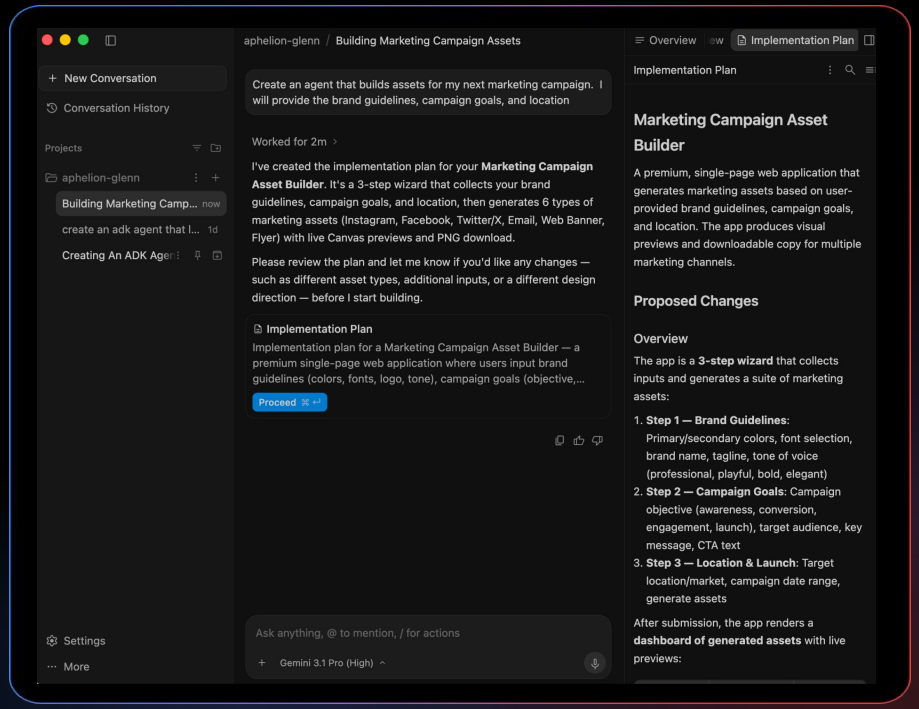

Put agents on autopilot with cron schedules. Have agents wake up and execute tasks on a predefined schedule.

Voice

Describe what you want in plain language via mic, powered by Gemini's latest audio understanding capabilities. The agent takes it from there.

Subagents

The main agent delegates subtasks to focused subagents that work in parallel. The main agent stays focused on the big picture while each subagent goes deep on its task.

Agent Development Kit (ADK)

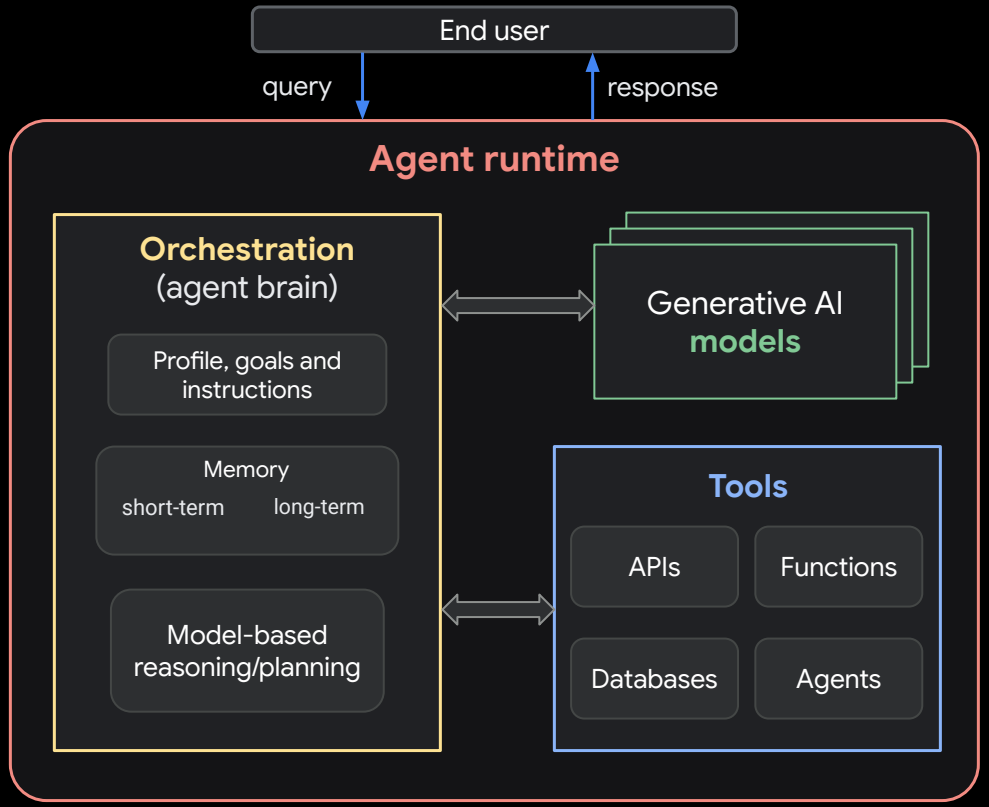

Proprietary + Confidential

What does the ADK include?

- Multi-agent systems
- Prebuilt, custom, and community tools
- Support for evaluation
- A convenient local development UI with debugging tools
- Callbacks to invoke functions throughout the flow
- Session memory for stateful conversations
- Collaboration on documents with shared artifacts
- Can deploy to Agent Runtime for fully-managed agent infrastructure

Proprietary + Confidential

Agent Development Kit SDK

Key components

- **Models:** Used to reason over goals, determine the plan and generate a response
- **Tools:** Fetch data, perform actions or transactions by calling other APIs or services
- **Orchestration:** Maintain memory and state (including the approach used to plan), tools, data provided and fetched
- **Runtime:** Execute the system when invoked

agents-cli

Introducing agents-cli

CLI and skills for building, deploying, and optimizing AI agents on Google Cloud

```
uvx google-agents-cli setup
```

Overview of agents-cli

Turn any coding assistant into an expert at building and deploying AI agents on Google Cloud

1. Core Value Prop

Empowers AI coding assistants (Antigravity, Claude Code, Codex) with specialized skills to build, scale, govern, and optimize enterprise agents.

Operates both as an assistant skill-suite and a standalone CLI tool.

```
# Quick Setup
uvx google-agents-cli setup
```

Works seamlessly with:

- Antigravity CLI
- Claude Code
- Codex
- Any agent using MCP / Skills

2. Specialized Agent Skills

Workflow & Scaffolding

`google-agents-cli-workflow`
`google-agents-cli-scaffold`

Lifecycle rules, template creation, model selection, code preservation.

ADK Core Development

`google-agents-cli-adk-code`

ADK Python API — agents, tools, orchestration, callbacks, and state management.

Evaluation & Optimization

`google-agents-cli-eval`

Evaluation methodology, datasets, LLM-as-judge, adaptive rubrics, auto-tuning.

Deployment & Publishing

`google-agents-cli-deploy`
`google-agents-cli-publish`

Deploy to Agent Runtime, Cloud Run, GKE, CI/CD, and Gemini registration.

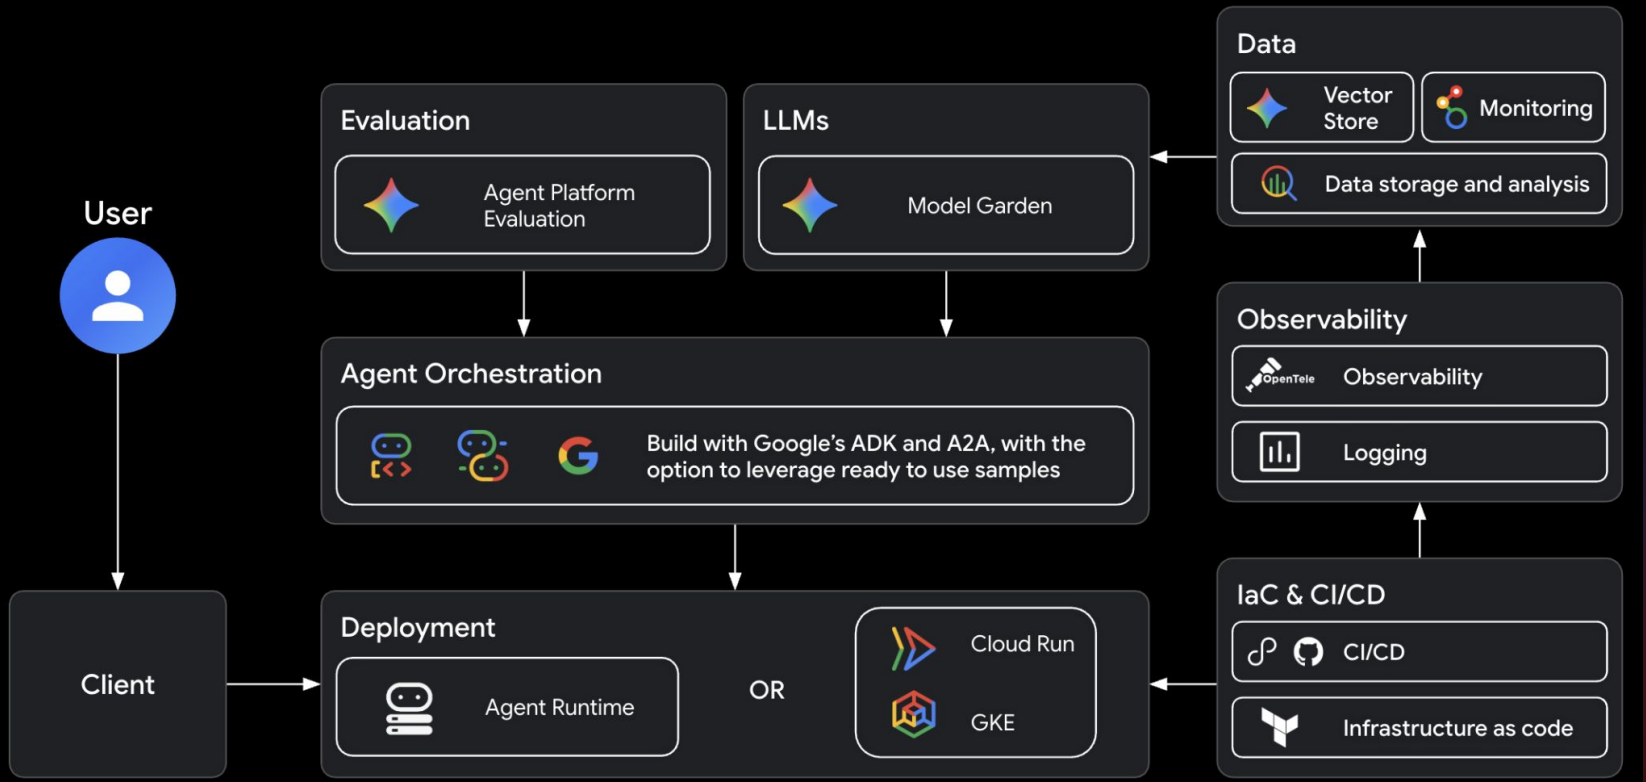

Observability & Operations

`google-agents-cli-observability`

Cloud Trace integration, BigQuery analytics for LLM scoring and token patterns.

CLI Commands: setup • create • eval run • deploy • publish gemini

Agents CLI Architecture

Getting Started with Agents CLI

A CLI & skills package for building, evaluating, and deploying AI agents on Google Cloud

1. Prerequisites & Install

Requires **Python 3.11+**, **uv**, and **Node.js**.

One-command setup installs the CLI & skills:

```
uvx google-agents-cli setup
```

Authentication:

- Auto-detects `gcloud` credentials
- Or set `GEMINI_API_KEY`

2. Build with Coding Agents

Supercharge coding assistants with **7 specialized ADK skills**:

Antigravity • Claude Code • Codex

Key Capabilities:

- Project scaffolding & ADK code
- Eval lifecycle & datasets
- Deployment to Gemini Runtime & Cloud Run
- Trace & observability

3. Manual CLI Workflow

Drive the entire lifecycle directly from your terminal:

```
# Create project
agents-cli create my-agent
# Launch dev playground
agents-cli playground
```

Starts the ADK web playground at `localhost:8080` with hot reload for rapid development.

End-to-End Development Lifecycle

6-phase workflow for building, evaluating, and operating production AI agents

0. Understand & Spec

Define scope, APIs, safety constraints, and target setup.

Saves answers directly to:

```
.agents-cli-spec.md
```

1. Scaffold & Recipe

Create template project and inject recipes (RAG, memory, OAuth):

```
agents-cli create my-agent
# prototype or full target
```

2. Build & Iterate

Implement logic via coding agent or manually in **app/agent.py**.

```
agents-cli playground
agents-cli lint
```

3. Evaluate

Run GenAI Eval SDK benchmark loops (5-10+ fix iterations):

```
agents-cli eval run
# eval-fix optimization
```

4. Deploy & Publish

Ship to Cloud Run / Agent Runtime and optional Gemini catalog:

```
agents-cli deploy
agents-cli publish gemini
```

5. Observe

Monitor live performance and logs in production:

- **Cloud Trace** enabled by default
- **BigQuery Analytics** for LLM scoring & token patterns

Gemini Enterprise

Applications and solutions

Gemini Enterprise app

Google Antigravity

Gemini Enterprise for Customer Experience

Custom apps built by you or partners

Gemini Enterprise Agent Platform

- 1P, 3P, open models
- Model tuning and training
- Agent frameworks and APIs
- Agent runtimes and sandboxes
- Agent governance
- Policy and security gateways
- Advanced threat detection
- Observability, evaluation, simulation

Agentic capabilities across

Build | Scale | Govern | Optimize

Powered by the integrated stack for agentic AI

AI Hypercomputer

Agentic Data Cloud
